PERSONAL TRAINING PROGRAM · BUILT FOR KIRAN · PHASE 2

LEAN BULK
4-DAY FULL BODY (PHASE 2)

The growth phase to run after your cut. Higher volume, a heavy top set on every lead lift for strength, a controlled calorie surplus for lean mass, and a clear plan for tracking, adjusting and ending the bulk. Same 4-day structure and the same schedule around badminton and dance.

4 / week	9-14	+200-300	60-80 min
TRAINING DAYS	SETS / MUSCLE / WEEK	KCAL / DAY SURPLUS	PER SESSION

MON	TUE	WED	THU	FRI	SAT	SUN
Full Body 1 Quads, Chest & Back	**Full Body 2** Hamstrings, Back & Chest	**Rest** optional badminton	**Full Body 3** Quads, Shoulders & Arms	**Full Body 4** Single-Leg, Back Width & Grip	**Badminton** No gym	**Rest**

MUSCLE GROUP KEY

Legs · Calves · Chest · Back · Shoulders · Arms · Abs · Forearms

What changes vs. the cutting program: a heavy top set (3-6 reps) on the lead lift of each day, then back-off sets; +1-2 sets for chest, back, quads, hamstrings and calves; direct trap and lat-isolation work added; ab and forearm work trimmed; and a calorie surplus so the extra training turns into muscle. Run it for 12-24 weeks, then transition to a short cut or maintenance.

A Lean Bulk Setup: Calories, Protein & Food

The training only works if the eating supports it

Start the bulk when...

• You have finished your cut and are around **12-15% body fat** (abs visible at rest, waist clearly smaller than at the start). Do not bulk from 20%+ body fat - cut or recomp first.

• Take a **1-2 week maintenance phase** first (diet break). It resets hunger, sleep and training performance and also tells you your real maintenance calories.

• You can commit to 12-24 weeks. A lean bulk is slow on purpose.

Find your maintenance, then add a small surplus

• **Estimate:** bodyweight (kg) x 33-36 kcal for your activity level (gym 4x + badminton + dance). This is a starting guess only.

• **Confirm:** eat that for 2-3 weeks; if the weekly average weight is flat, that is maintenance. If it rises or falls, adjust by 150-200 kcal.

• **Surplus:** add **+200-300 kcal/day** (about 5-10% above maintenance). More than that mostly adds fat, not muscle.

• Do not eat the same every day: eat a bit more on gym and badminton days, a bit less on full rest days.

Target rate of gain

• First year of serious training: about **0.25-0.5% of bodyweight per week** (e.g. 70 kg = ~0.2-0.35 kg/week, ~1-1.5 kg/month).

• More experienced: about 0.1-0.25% per week.

• Gaining faster than this? Remove 100-200 kcal. Not gaining for 2-3 weeks? Add 100-200 kcal.

Daily macros (simple)

• **Protein:** 1.6-2.2 g per kg bodyweight (aim ~1.8). 4 meals of 30-40 g works well.

• **Fat:** 0.8-1.0 g per kg (never below ~0.6 g/kg). Includes cooking oil, ghee, nuts, eggs, paneer.

• **Carbs:** the rest of your calories. Put more around training and badminton: that's what drives performance and recovery.

• **Fibre / veg:** 25-35 g fibre daily; fruit and veg at most meals for health.

Indian food ideas for a lean bulk

• **Protein:** eggs, chicken, fish, paneer, curd / Greek yogurt, milk, dal, rajma, chole, soya chunks, whey. Vegetarian? Mix dal + rice, paneer, curd, soya and whey to reach protein.

• **Carbs:** rice, roti, oats, poha, idli/dosa with sambar, potatoes/sweet potato, bananas, dates.

• **Fats:** measured ghee/oil, nuts, peanut butter.

• **Easy calories:** a banana + peanut butter + milk/whey shake, a bigger rice portion, or an extra roti with dal and curd.

Around badminton and dance

• Badminton and dance add real calorie burn: with 2 sessions of each you typically need about **100-200 kcal/day more on average**. Raise intake on those days, mostly with carbs.

• **Before:** a carb meal 1-3 hr before. **After:** 30-40 g protein + carbs within 1-2 hr. Drink water + electrolytes in the heat.

• Do not use your watch's calorie number to decide food. Use your weekly weight trend.

B Warm-Up, Top Sets & How To Read

Every session, before exercise 1

General pre-workout warm-up

1. **5 min cardio** - raise your heart rate to ~130 bpm.
2. **Arm swings** - 10 each direction. **Leg cross swings** - 10 each leg.
3. **Ramp to your top set** - see the table. Do not grind warm-ups.

Top-set method (new in this phase)

• For each lead lift (marked **top** in the tables): ramp up, then do **1 hard set** in the low rep range at RPE 9 (about 1 rep left). Reduce the weight ~10% for the back-off sets.

• **Progress:** when you hit the top of the rep range on the top set with good form, add 2.5 kg (upper body) or 5 kg (legs) next session.

• **Stop a rep early** on technical lifts (RDL, hack squat) if form slips.

Warm-up ramp to a top set

SET	% OF TOP SET	REPS
Warm-up 1	40-50%	8-10
Warm-up 2	60-65%	5
Warm-up 3	75-80%	3
Warm-up 4	88-92%	1-2
TOP SET	100%	as prescribed

RPE and reps

• RPE 8-9 = 2-1 reps left; RPE 9-10 = 1 or fewer left; RPE 10 = true failure. Isolation work: last set to failure, no dropsets.

• **Superset tags (A1/A2):** do back-to-back with 0 min rest, then rest as listed on A2.

• **WATCH** = video link from your original program; **SEARCH VIDEO** = YouTube search for new exercises.

C Weekly Volume & Intensity

Hard sets per muscle per week

MUSCLE	SETS / WEEK	FREQ.	WHERE (DAY: SETS)	MAIN REP RANGE	STATUS
Quads	13	4x	D1 Hack Squat 3 - D2 Leg Ext 3 - D3 Leg Press 4 - D4 Bulgarian 3	3-15	Optimal
Hamstrings	10	3x	D1 Leg Curl 3 - D2 RDL 3 - D3 Leg Curl 4 (+ split squat)	5-12	Optimal
Glutes	~13 (indirect)	4x	RDL, hack/leg press, Bulgarian split squat	5-12	Optimal
Chest	12	3x	D1 Incline 3 - D2 Flat 3 - D4 Incline 3 + Fly 3	5-15	Optimal
Back (lats + upper back)	14	4x	D1 Pulldown 3 + Straight-Arm 2 - D2 Row 3 - D3 Row 3 - D4 Pull-Up 3	4-15	Optimal
Side delts	9	3x	D1 Cable 3 - D3 DB 3 - D4 DB 3	12-20	Good (+ pressing)
Rear delts	6	2x	D2 Reverse Pec Deck 3 - D4 Face Pull 3 (+ rows)	12-20	Good
Front delts	3 direct	1x	D3 Seated DB Press 3 (+ ~15 sets of pressing)	5-10	Covered by pressing
Upper traps	2 + carries	2x	D3 DB Shrug 2 - D4 Farmer Carry 2 (+ rows)	8-15	Good
Biceps	9 direct	3x	D1 Preacher 3 - D2 Incline Curl 3 - D3 Hammer 3 (+ back work)	8-12	Optimal
Triceps	9 direct	3x	D1 Overhead 3 - D2 Pushdown 3 - D4 Overhead 3 (+ pressing)	10-15	Optimal
Forearms / grip	7	3x	D3 Hammer + Wrist Curl 2 - D4 Farmer Carry 2	10-20	Good
Calves	12	4x	D1 Standing 3 - D2 Seated 3 - D3 Standing 3 - D4 Seated 3	8-15	Optimal
Abs	6	2x	D2 Hanging Leg Raise 3 - D4 Ab Wheel/Cable Crunch 3	8-15	Good (+ compounds)

Volume guidelines

- **Effective range:** roughly 10-20 hard sets per muscle per week. In a surplus your recovery is better, so this plan is at the productive end for priority muscles.
- **Sessions:** Day 1 = 26 sets, Day 2 = 27, Day 3 = 27, Day 4 = 29. About 60-80 minutes each.
- A "hard set" is taken to 0-2 reps from failure. Easy sets with 4+ reps left do not count.

Intensity map

LIFT TYPE	REPS	RPE
Top sets (hack squat, incline, RDL, flat, row, shoulder press, pull-up)	3-7	9
Back-off sets and other compounds	6-12	8-9
Isolation (curls, extensions, leg curl/ext, fly)	10-15	9-10, last set 10
Side/rear delts, calves, forearms	12-20	9-10

01 Full Body 1

Quads, Chest & Back - Heavy Day

LEGS | CHEST | BACK | SHOULDERS | ARMS | CALVES

#	EXERCISE	SETS x REPS	WARM-UP SETS	RPE	REST
1	**Hack Squat (or Leg Press)** LEGS Quads - Glutes WATCH *Ramp up with warm-up sets, then do ONE top set at RPE 9 (1 rep left). Drop the weight ~10% and do the back-off sets at RPE 8-9. Feet shoulder-width and low on the platform. Lower under control for 2-3 sec to deep range (thighs at or below parallel) with your back and hips glued to the pad. Drive up through the mid-foot without slamming the knees into lockout. On a leg press, use the same low/narrow foot position and never let the lower back round off the pad. Add weight or reps every week.* **Subs:** Leg Press, Smith Machine Squat, Goblet Squat	1 x 3-5 (top) + 2 x 6-8	3	9 / 8-9	~3-4 min
2	**Incline DB Press** CHEST Upper Chest - sec. Front Delt, Triceps WATCH *Ramp up with warm-up sets, then do ONE top set at RPE 9 (1 rep left). Drop the weight ~10% and do the back-off sets at RPE 8-9. Bench at 30-45 degrees. Pull shoulder blades back and down, DBs over the upper chest. Lower for 2-3 sec to a deep stretch with elbows ~45-60 degrees from the torso, then press up and slightly together. A steeper bench shifts load to front delts, so stay at 30-45.* **Subs:** Machine Incline Press, Smith Incline Press, Flat DB Press	1 x 4-6 (top) + 2 x 8-10	2-3	9 / 8-9	~3 min
3	**Neutral-Grip Lat Pulldown** BACK Lats - sec. Biceps, Rear Delt WATCH *Lean back slightly, chest up. Pull elbows down and into your sides (think elbows to back pockets), squeeze the lats, then let the bar rise slowly until your lats are fully stretched. No swinging or body English.* **Subs:** Wide Lat Pulldown, Assisted Pull-Up, Machine Pulldown	3 x 8-10	2	9-10	~2 min
4	**Straight-Arm Pulldown (Cable)** BACK Lats (stretch / lat isolation) SEARCH VIDEO *Rope or straight bar on a high pulley, arms nearly straight, a slight forward hip hinge. Sweep the bar down to your thighs by driving the shoulder blades down (not by bending the elbows). Keep tension in the lats the whole way back up. Isolates the lats with no biceps help.* **Subs:** Cable Pullover, DB Pullover, Machine Pullover	2 x 12-15	-	9-10	~1.5 min
5	**Seated Leg Curl** LEGS Hamstrings WATCH *Set the pad just above your heels and the thigh pad snug. Curl all the way, hold the squeeze 1 sec, then take 3 sec to return to a full stretch. The seated version stretches the hamstrings more than lying, which is better for growth.* **Subs:** Lying Leg Curl, Stability-Ball Curl, Nordic Curl (assisted)	3 x 10-12	1	9-10	~2 min

#	EXERCISE	SETS x REPS	WARM-UP SETS	RPE	REST
6	**Cable Lateral Raise** SHOULDERS Side Delt SEARCH VIDEO *Cable at the lowest setting, stand side-on, work one arm at a time. Slight lean away, soft elbow. Lead with the elbow (not the hand) out to shoulder height, then lower slowly. The cable keeps tension on the delt at the bottom where dumbbells give none.* **Subs:** DB Lateral Raise, Lean-Away Cable Lateral Raise	3 x 12-15	-	9-10	~1.5 min
7	**A1 Overhead Cable Triceps Extension** ARMS Triceps (long head) WATCH *Rope on a mid/high pulley, face away, hands by your ears, elbows pointing forward and kept still. Extend fully, then lower slowly to a deep stretch behind the head. Overhead work trains the largest tricep head, so it is done 2x per week.* **Subs:** DB Overhead Extension, EZ-Bar Skull Crusher, French Press	3 x 10-12	-	9-10	0 min
8	**A2 Preacher Curl** ARMS Biceps (short head) - Brachialis SEARCH VIDEO *Armpits snug on the pad. Lower slowly to near full extension (do not slam into lockout), then curl up without letting the elbows lift. Use an EZ bar or the preacher machine. The bottom stretch is where this lift builds muscle, so do not shorten it.* **Subs:** Machine Preacher Curl, Cable Preacher Curl, EZ-Bar Curl	3 x 8-12	-	9-10	~1.5 min
9	**Standing Calf Raise** CALVES Gastrocnemius (calf shape) SEARCH VIDEO *Drop your heels as low as possible, pause 2 sec in the full stretch, then rise onto the balls of your feet and squeeze. No bouncing. Go heavy: calves handle a lot of load.* **Subs:** Leg Press Toe Press, Smith Machine Calf Raise, Single-Leg DB Calf Raise	3 x 8-12	-	9-10	~1.5 min

02 Full Body 2

Hamstrings, Back & Chest - Volume Day

LEGS BACK CHEST SHOULDERS ARMS CALVES ABS

#	EXERCISE	SETS x REPS	WARM-UP SETS	RPE	REST
1	**Romanian Deadlift** LEGS Hamstrings - Glutes - sec. Lower Back WATCH *Ramp up with warm-up sets, then do ONE top set at RPE 9 (1 rep left). Drop the weight ~10% and do the back-off sets at RPE 8-9. Neutral spine, soft knees. Push your hips back, keep the bar against your legs, and lower until you feel a strong hamstring stretch (around mid-shin). Drive the hips forward to stand. The moment your lower back starts to round, that is the end of the set.* **Subs:** DB Romanian Deadlift, Smith Machine RDL, 45-Degree Hyperextension	1 x 5-6 (top) + 2 x 8-10	2-3	9 / 8-9	~3 min
2	**Seated Cable Row (V-bar / close grip)** BACK Mid-Back - Lats - sec. Biceps WATCH *Ramp up with warm-up sets, then do ONE top set at RPE 9 (1 rep left). Drop the weight ~10% and do the back-off sets at RPE 8-9. Sit tall with a slight forward lean at the start. Pull the handle to your lower ribs, squeeze the shoulder blades together for 1 sec, then stretch forward under control. After RDLs, keep your torso still - no rocking. This is your chest-supported-row replacement (no machine needed).* **Subs:** Incline-Bench Chest-Supported DB Row (lie face down on a 30-45 degree bench), T-Bar Row, One-Arm Cable Row	1 x 6-8 (top) + 2 x 8-10	2	9 / 9-10	~2-3 min
3	**Flat DB Press** CHEST Mid/Lower Chest - sec. Front Delt, Triceps WATCH *Ramp up with warm-up sets, then do ONE top set at RPE 9 (1 rep left). Drop the weight ~10% and do the back-off sets at RPE 8-9. Shoulder blades pinned back and down, slight arch, feet planted. Lower for 2-3 sec to a deep stretch, press up powerfully. Never let the dumbbells crash into the bottom stretch.* **Subs:** Machine Chest Press, Weighted Dip, Barbell Bench Press	1 x 5-7 (top) + 2 x 8-10	2	9 / 9	~2-3 min
4	**Leg Extension** LEGS Quads (incl. rectus femoris) SEARCH VIDEO *Align your knees with the machine pivot. Extend fully and squeeze 1 sec, then lower for 3 sec. Best exercise for the rectus femoris, which squats and presses barely train.* **Subs:** Sissy Squat, Spanish Squat (band), Single-Leg Extension	3 x 10-15	-	9-10	~1.5 min
5	**Reverse Pec Deck** SHOULDERS Rear Delt - sec. Mid-Traps WATCH *Chest against the pad, light grip. Swing the arms out and slightly back, leading with the elbows, not by squeezing the handles hard. Smooth and controlled.* **Subs:** Reverse Cable Fly, Bent-Over DB Reverse Fly, Rope Face Pull	3 x 12-20	-	9-10	~1.5 min

#	EXERCISE	SETS x REPS	WARM-UP SETS	RPE	REST
6	**A1 Incline DB Curl** ARMS Biceps (long head / peak) WATCH *Bench at 45-60 degrees, arms hanging behind your torso for a deep stretch. Curl without swinging; lower slowly to full stretch. Best exercise for the long head (the biceps peak).* **Subs:** Cable Curl (low pulley, arm behind torso), Bayesian Curl, Standing DB Curl	3 x 10-12	-	9-10	0 min
7	**A2 Triceps Pushdown** ARMS Triceps (lateral head) WATCH *Elbows pinned to your sides, extend until fully locked, control the return to ~90 degrees. Rope or straight bar both work - keep your torso still.* **Subs:** Straight-Bar Pushdown, Cable Kickback, DB Kickback	3 x 10-15	-	9-10	~1.5 min
8	**Seated Calf Raise (bent knee)** CALVES Soleus (calf width) WATCH *Knees bent at 90 degrees isolates the soleus (calf thickness). Full stretch, 2-sec pause at the bottom, no bouncing.* **Subs:** Standing Calf Raise, Leg Press Toe Press	3 x 10-15	-	9-10	~1.5 min
9	**Hanging Leg Raise** ABS Lower Abs - Hip Flexors SEARCH VIDEO *Hang from a bar, tilt your pelvis up (posterior tilt) and raise knees to chest or higher. Curl the pelvis, do not just swing the legs. No momentum.* **Subs:** Captain's Chair Leg Raise, Reverse Crunch, Lying Leg Raise	3 x 10-15	-	9-10	~1 min

03 Full Body 3

Quads, Shoulders, Upper Back & Arms

LEGS | SHOULDERS | BACK | ARMS | FOREARMS | CALVES

#	EXERCISE	SETS x REPS	WARM-UP SETS	RPE	REST
1	**Leg Press (mid-foot position)** LEGS Quads - Glutes - sec. Hamstrings WATCH *Feet shoulder-width, mid platform (a little higher than Day 1 for more glute/hamstring). Lower deep with your lower back flat on the pad, then drive up. Varying foot position across the week hits the legs from a different angle.* **Subs:** Hack Squat, Goblet Squat, DB Walking Lunge	4 x 8-12	2	8-9	~2-3 min
2	**Seated DB Shoulder Press** SHOULDERS Front/Side Delt - sec. Triceps WATCH *Ramp up with warm-up sets, then do ONE top set at RPE 9 (1 rep left). Drop the weight ~10% and do the back-off sets at RPE 8-9. Bench upright at 80-90 degrees. Start with DBs at ear level, press overhead without arching, and lower under control to ear/chin height. This is your ONLY overhead press of the week - front delts already get plenty from incline and flat pressing.* **Subs:** Machine Shoulder Press, Standing DB Arnold Press, Smith Shoulder Press	1 x 5-7 (top) + 2 x 8-10	2	9 / 8-9	~2-3 min
3	**Seated Cable Row (wide bar)** BACK Upper Back - Rear Delt - sec. Biceps WATCH *Use a wide overhand bar. Elbows flare ~45-60 degrees as you pull to the upper abdomen/lower chest, squeezing the upper back. The wide grip shifts emphasis from the lats (Day 2 close grip) toward upper-back width and rear delts.* **Subs:** Incline-Bench Chest-Supported DB Row, T-Bar Row, Wide Lat-Bar Row	3 x 8-12	1-2	9-10	~2 min
4	**Seated Leg Curl** LEGS Hamstrings WATCH *Same setup as Day 1: full range, 1 sec squeeze, 3 sec lowering. This is the 4th set vs Day 1 so hamstrings reach ~10 weekly sets.* **Subs:** Lying Leg Curl, Stability-Ball Curl, Nordic Curl (assisted)	4 x 10-12	1	9-10	~2 min
5	**DB Lateral Raise (standing)** SHOULDERS Side Delt WATCH *Lean forward ~10-15 degrees. Raise the DBs out and slightly forward (the scapular plane) to shoulder height with your pinkies a touch higher than thumbs. Take 3 sec to lower. DB raises are a great exercise - the only weak spot is no tension at the bottom, which the Day 1 cable version covers.* **Subs:** Cable Lateral Raise, Lean-Away Cable Lateral Raise	3 x 12-20	-	9-10	~1.5 min

#	EXERCISE	SETS x REPS	WARM-UP SETS	RPE	REST
6	**DB Shrug** BACK Upper Traps SEARCH VIDEO *Hold heavy DBs at your sides. Lift your shoulders straight up toward your ears, hold 1-2 sec at the top, then lower fully for a stretch. Don't roll the shoulders. Heavy farmer carries also build the traps - this adds a direct hit.* **Subs:** Barbell Shrug, Smith Shrug, Trap-Bar Shrug	2 x 10-15	-	9-10	~1.5 min
7	**A1 Hammer Curl** ARMS Brachialis - Brachioradialis (forearm) - Biceps SEARCH VIDEO *Neutral (thumbs-up) grip, elbows pinned. Curl up, squeeze, lower slowly. Builds the brachialis (pushes the biceps up from underneath) and the brachioradialis, the big muscle on the top of the forearm. Keep wrists straight.* **Subs:** Rope Hammer Curl (cable), Cross-Body Hammer Curl, Reverse EZ-Bar Curl	3 x 10-12	-	9-10	0 min
8	**A2 Wrist Curl** FOREARMS Wrist Flexors WATCH *Forearms on a bench or thighs, palms up. Let the bar roll down to your fingertips, then curl it up through full range. Go light for the first 2 weeks - tendons adapt slowly.* **Subs:** Cable Wrist Curl, Behind-the-Back Barbell Wrist Curl	2 x 12-20	-	9-10	~1.5 min
9	**Standing Calf Raise** CALVES Gastrocnemius (calf shape) SEARCH VIDEO *Full stretch with a 2-sec pause at the bottom, strong squeeze at the top. Second standing session of the week.* **Subs:** Leg Press Toe Press, Smith Machine Calf Raise, Single-Leg DB Calf Raise	3 x 8-12	-	9-10	~1.5 min

04 Full Body 4

Single-Leg, Back Width, Chest & Grip

LEGS | BACK | CHEST | SHOULDERS | ARMS | CALVES | FOREARMS | ABS

#	EXERCISE	SETS x REPS	WARM-UP SETS	RPE	REST
1	**DB Bulgarian Split Squat** LEGS Quads - Glutes - sec. Hamstrings WATCH *Start with your weaker leg. Rear foot on a bench, squat deep with your front knee tracking over the foot. Lean slightly forward for more glutes, stay upright for more quads. Do the same reps on both legs.* **Subs:** Goblet Split Squat, Smith Split Squat, DB Walking Lunge	3 x 8-12 / leg	2	8-9	~2 min
2	**Pull-Up (weighted when possible)** BACK Lats - Lower Traps - sec. Biceps SEARCH VIDEO *Ramp up with warm-up sets, then do ONE top set at RPE 9 (1 rep left). Drop the weight ~10% and do the back-off sets at RPE 8-9. Overhand grip slightly wider than the shoulders. Start from a dead hang, drive elbows down toward your ribs until your chin clears the bar, and lower for 2 sec. When you can hit 10 clean reps on all sets, add weight with a belt.* **Subs:** Assisted Pull-Up, Wide Lat Pulldown (see 2-grip pulldown video), Neutral-Grip Pulldown	1 x 4-6 (top) + 2 x 8-10	2	9 / 9-10	~2-3 min
3	**Incline DB Press (lighter)** CHEST Upper Chest - sec. Front Delt, Triceps WATCH *Same bench angle as Day 1, but a lighter weight and more reps. Focus on a deep stretch and a hard squeeze at the top - no bouncing out of the bottom.* **Subs:** Machine Incline Press, Flat DB Press	3 x 10-12	1	9-10	~2 min
4	**Cable Fly (alternate low-to-high / high-to-low)** CHEST Upper/Inner Chest SEARCH VIDEO *Alternate weeks: low-to-high (upper chest) and high-to-low (mid/lower chest). Slight forward lean, arms slightly bent, squeeze at the end range, stretch fully without overstretching behind the shoulders.* **Subs:** Pec Deck, Incline DB Fly, Cable Crossover	3 x 12-15	-	9-10	~1.5 min
5	**A1 Rope Face Pull** SHOULDERS Rear Delt - sec. Rotator Cuff WATCH *Rope at forehead height. Pull toward your face with the elbows high and wide, and rotate the hands outward at the end. Great shoulder-health insurance against all the pressing.* **Subs:** Reverse Pec Deck, Reverse Cable Fly	3 x 12-15	-	9-10	0 min

#	EXERCISE	SETS x REPS	WARM-UP SETS	RPE	REST
6	**A2 DB Lateral Raise (1-sec pause)** SHOULDERS Side Delt WATCH *Same movement as Day 3 with a 1-sec pause at the top of each rep for extra time under tension. Lighter weight, burn-focused finisher.* **Subs:** Cable Lateral Raise, Lean-Away Cable Lateral Raise	3 x 15-20	-	10	~1.5 min
7	**Overhead Cable Triceps Extension** ARMS Triceps (long head) WATCH *Same as Day 1. Elbows forward and pinned, full stretch behind the head, lock out hard. Second long-head session of the week.* **Subs:** DB Overhead Extension, EZ-Bar Skull Crusher, French Press	3 x 10-12	-	9-10	~1.5 min
8	**Seated Calf Raise (bent knee)** CALVES Soleus (calf width) WATCH *Soleus session #2. Full stretch, 2-sec pause at the bottom.* **Subs:** Standing Calf Raise, Leg Press Toe Press	3 x 10-15	-	9-10	~1.5 min
9	**Farmer Carry** FOREARMS Grip - Traps - Core SEARCH VIDEO *Pick up the heaviest DBs you can hold with good posture. Shoulders down and back, ribs stacked over hips, short quick steps. If grip is already shot, go lighter or shorter rather than losing posture.* **Subs:** Trap-Bar Carry, Suitcase Carry (one side), Dead Hang (30-45 sec)	2 x 30-40 m	-	8-9	~1 min
10	**Ab Wheel Rollout (or Cable Crunch)** ABS Rectus Abdominis - Anti-Extension Core SEARCH VIDEO *From your knees, tuck the ribs down and squeeze the glutes. Roll out only as far as your lower back stays flat, then pull back with your abs. Stop the set when your lower back starts to sag.* **Subs:** Cable Crunch, Plank, Dead Bug	3 x 8-12	-	9-10	~1 min

D Progression, Blocks & Tracking

How to keep getting stronger every week

Double progression for non-top sets

• Each exercise has a rep range (e.g. 3 x 8-10). Start at the bottom, add 1 rep per set each week with the same weight. When all sets hit the top at the target RPE, add weight (2.5-5 kg legs, 1-2.5 kg upper body/isolation) and restart at the bottom.

• **Top sets** follow the same idea: hit the top of the rep range (e.g. 5) with clean form, then add weight.

• Log every set (weight, reps, RPE). If you cannot beat last week, you cannot measure progress.

Deload every 6th week

• Keep the exercises and weights but do **2 sets instead of 3**, RPE 7-8, no top sets pushing to RPE 9. Joints, tendons and the nervous system recover; strength rebounds.

• Deload sooner if lifts drop 2 sessions in a row, joints ache, sleep is poor or motivation tanks.

6-week block template

WEEK	TOP SET RPE	FOCUS
1	8	Re-learn the lifts, find weights
2	8.5	Add 1 rep or small load
3	9	Push the top sets
4	9	Push, PR attempts on non-top lifts
5	9-9.5	Peak week, rep PRs
6	7-8	Deload (2 sets / exercise)

Next block

Restart Week 1 with top-set weights 2.5-5% higher than your last block's best. Rotate one exercise per muscle (see Subs) every 1-2 blocks to keep the stimulus fresh. Keep the main lifts the same so progress stays measurable.

Track these key lifts every week (your strength scoreboard)

• Hack squat / leg press top set, incline DB press top set, RDL top set, flat DB press top set, seated DB shoulder press top set, pull-up (reps or added weight), seated cable row top set.

• Goal over a block: improve most of these by 1-2 reps or 2.5-5% load while bodyweight rises slowly. If strength stalls for 3 weeks, check sleep, calories and recovery before changing the program.

E Evaluate & Adjust

Make decisions from data, not guesses

Lean-bulk dashboard (check every 2 weeks)

WHAT YOU SEE	ACTION
Weekly avg weight up 0.25-0.5%/wk, strength rising, waist barely moving	On track - change nothing
Weight up faster than 0.5%/wk, waist growing quickly	Remove 100-200 kcal/day
Weight flat for 2-3 weeks, strength flat	Add 100-200 kcal/day (carbs)
Weight up but strength flat/falling	Check sleep, protein, stress, deload; do not just add calories
Waist up more than ~2-3 cm in 8-12 wks	Too fast: reduce the surplus; consider ending the bulk
Joints ache, resting HR up 5-7 bpm for days	Deload; drop optional sessions

What to measure

- **Bodyweight:** daily, same time, use the weekly average.
- **Waist:** at the navel, once a week. Waist up with weight is expected; a fast rise means too much fat.
- **Photos:** front, side, back, same light, every 2 weeks.
- **Arms, chest, shoulders, thigh:** monthly tape measurements.
- **Strength log:** the key lifts above.

Optional sessions in a bulk

- Badminton and dance still count as activity: with a surplus you can usually take the optional 3rd badminton or 3rd dance session when recovery is green. Still protect gym sessions first, keep Wed or Sun as a full rest day, and add 100-200 kcal for each extra session.

Lagging muscle?

- After 6-8 weeks, if one muscle still lags (check photos and measurements), add 1 set per session to it (+3-4 sets/week) and re-evaluate after a block. Common choices: side delts, upper chest, biceps, calves.

F Injury Prevention, Health & Ending The Bulk

Train heavier safely, then finish cleanly

Heavy top sets: safety

- Always ramp up. A top set is never your first set of the exercise.
- Use safety stops/pins on leg press, hack squat and bench-style lifts; spotters or a safe bail-out on heavy pressing.
- **RDL:** stop the set the moment your lower back rounds. **Leg press / hack squat:** keep your lower back flat on the pad.
- **Shoulders:** front-of-shoulder pinching means stop and reassess. Keep face pulls and reverse pec deck every week - they protect the shoulder from all the pressing.
- Keep technique cleaner on top sets than back-off sets; end a top set a rep early if form slips.

Health basics

- **Sleep 7-9 hr** is the biggest recovery tool. **Hydrate** 2.5-3.5 L/day, more in heat.
- Get blood work once a year (lipids, blood sugar, vitamin D, B12, thyroid if symptoms). Fix deficiencies - they limit gains.
- Creatine monohydrate 3-5 g/day is the one supplement with strong evidence for strength and muscle.

When to end the bulk

- You have gained roughly 3-6 kg (or reached the body fat you are comfortable with: when abs lines fade and waist is up ~4-6 cm).
- Strength gains have stalled despite good sleep and recovery for 3+ weeks.
- You have done 12-24 weeks - then take a break from the surplus.
- **Transition:** 1-2 weeks at maintenance, then either a 4-8 week mini-cut using your cutting-phase plan (steps, moderate deficit, same lifts) or stay at maintenance if you like how you look.

How the phases fit together

- **Cut** (8-12 wks) -> **maintenance** (1-2 wks) -> **lean bulk** (12-24 wks) -> **mini-cut** (4-8 wks) -> repeat. Over several cycles you end up leaner and more muscular than you would from cutting or bulking alone.
- Keep the training structure the same in all phases so your strength log stays comparable.

Aesthetics reminders

- Widen the V-taper with lats and side delts; keep legs and calves trained; keep posture in mind (rear delts, face pulls, tall stance).
- Stay patient: visible differences take 6-12 months of consistency.
